Talent Discovery and Career Exploration
Alexandra

This report presents the talents and inclinations shown in the birth chart, and the career fields where they can be put to use. It describes possibilities, not certainties: what happens depends on your choices, your effort and the opportunities you meet.

Your talents

Your talents at a glance:

- Imagination and artistic expression — *has a natural base and grows stronger with practice*
- Original thinking and new ideas — *has a natural base and grows stronger with practice*
- Aesthetics and design — *builds with time and experience*
- Presenting and public expression — *will show itself in practice*
- Supporting and encouraging others — *will show itself in practice*
- Teaching and sharing knowledge — *builds with time and experience*
- In-depth research — *will show itself in practice*
- Leadership and initiative — *builds with time and experience*
- Strategic thinking — *has a natural base and grows stronger with practice*
- Enterprise and managing resources — *will show itself in practice*
- Practical making and building — *will show itself in practice*
- Empathy and care — *seems to come naturally*
- Organisation and consistency — *blossoms when it finds the right opportunity*
- A sense of fairness and justice — *will show itself in practice*

The order is not random: the talents that show most strongly in your chart come first. All of these are possibilities. How far each one develops depends on your choices and practice.

Leading talents

Your most pronounced talents: the ones that show most clearly and that you may already recognise in yourself.

1. Imagination and artistic expression

with creativity that represents you · with passion and intensity · with a love of learning · with breadth and optimism

You may have a rich imagination and a need to express what you feel through images, sound, movement or stories. Your sensitivity can help you touch others in ways words alone do not. It starts from a natural ease, and practice can make it even stronger.

How to develop it: With regular creative practice – painting, music, theatre or photography workshops – and by showing your work to others.

2. Original thinking and new ideas

with a feel for what will work · bearing your own mark

You may see things from a different angle and be drawn to ideas that have not been tried yet. You often look for alternative solutions instead of automatically taking the most obvious path, and stepping away from the usual perhaps does not frighten you. You have a good starting point; with a little work it can become a real strength.

How to develop it: By proposing new solutions at work, joining innovation teams or hackathons, or running a small experimental project of your own.

3. Aesthetics and design

with an original, modern style · with spontaneity and liveliness · with depth, beyond the surface

You may have an eye for beauty: colours, proportions, the harmony of a space or an object. Making things both beautiful and functional at the same time can bring you real satisfaction. It may take some time to develop; if it does not come easily yet, that does not mean the talent is missing, and over time it often becomes one of your strongest points.

How to develop it: With design or graphics courses, taking care of how projects look at work, or arranging spaces.

4. Presenting and public expression

with energy and boldness on stage · with an imagination that captivates · with patience and practicality · with a natural radiance

You may feel comfortable in front of an audience and be able to draw attention and pass on enthusiasm. Your expressiveness can make a message memorable. Its real strength will show when you try it in real situations.

How to develop it: With presentations and talks, amateur theatre, broadcasts, podcasts or making videos.

5. Supporting and encouraging others

with a personal example that uplifts

You may be able to encourage others, see their potential and help them move forward. Your presence can give courage and stability to those working alongside you. It is worth trying it in practice, to see how well it suits you.

How to develop it: As a mentor to newer colleagues, a coach, a support-group facilitator or a volunteer in support programmes.

6. Teaching and sharing knowledge

with plain, clear explanations · with curiosity and flexibility

Sharing what you know and making difficult things look simple may come naturally to you. Seeing someone understand something thanks to you can be a real pleasure, and you often have patience with each person's pace. It may not always come easily; steady practice often turns it into a real strength.

How to develop it: With seminars or workshops for adults, mentoring newer colleagues or creating educational content online.

7. In-depth research

with steadiness and quality

You may feel the need to get to the root of things rather than stay on the surface. Persistence, focus and the willingness to stay with a question for a long time can lead you to findings others do not reach. Experience can show you how far it can go.

How to develop it: With postgraduate study, research projects, articles or a personal study of a subject that deeply interests you.

Core talents

Talents with a good, steady base. They are less pronounced than the leading ones, but they are real strengths and worth putting to use.

8. Leadership and initiative

with sensitivity towards those you guide

You may feel at ease taking the initiative and giving direction to a group. You can often see what needs to be done and motivate others to do it with you, with confidence and warmth. Early difficulties are natural for this talent and do not mean you lack it.

How to develop it: By coordinating a project or a team at work or in an association, and asking for feedback on how you inspire others.

9. Strategic thinking

seeing many steps ahead

You may think long-term, see the big picture and plan how to reach a goal step by step. Perhaps you foresee difficulties before they appear and keep an alternative plan ready. Some parts of it may come easily while others take more effort — and both count.

How to develop it: By planning projects and long-term goals at work, studying case studies, or playing strategy games such as chess.

10. Enterprise and managing resources

with warmth and confidence · with all your heart

You may have a sense of the value of things and spot opportunities where others do not. You often manage money, time and resources well, and the idea of building something of your own may appeal to you. If you try it on something specific, you will better understand what it can give you.

How to develop it: With a small venture of your own, entrepreneurship courses, or by taking responsibility for a budget.

11. Practical making and building

as part of who you are · with generosity and good spirits

You may enjoy making something tangible with your hands or with technical tools and seeing the result in front of you. Patience and practical thinking can help you turn an idea into reality. It is still to be discovered: real situations will show its shape.

How to develop it: With building, repairs, gardening or craft workshops, and by taking on practical projects at work or at home.

12. Empathy and care

with enthusiasm and a broad horizon

You may easily understand how others feel and want to look after them. Your warmth and intuition can make people feel safe around you. You often do it without much effort, almost by instinct.

How to develop it: Through volunteering, supporting people in need, and roles where attention to others makes the difference.

13. Organisation and consistency

as something that deeply reflects you

You may have the ability to bring order, break a large task into steps and see it through with consistency. Others may rely on you because you keep to schedules and do not leave

loose ends. It grows when it is given a chance, so it is worth looking for situations to try it out.

How to develop it: With organisation and project-management tools, and by taking on roles where reliability and meeting deadlines matter.

Emerging talents

Talents that show more faintly for now and need more practice to develop.

14. A sense of fairness and justice

with seriousness and respect for duty

You may have a strong sense of what is fair and feel bothered when someone is treated unjustly. You often weigh arguments carefully and stand up for values and rules that protect everyone. A first try, even a small one, can show you a lot about it.

How to develop it: On ethics committees, in mediation roles, in associations or organisations for rights, or with law courses.

How you learn best

The way you learn most easily can help each of your talents grow.

- **Through action:** when you try things out in practice, with movement, challenges and quick results.

Career fields worth exploring

Most are fields where two or more of your talents meet; where a talent does not meet another one, the field that suits it best is added. The order is not random: the fields where the most and strongest of your talents meet come first, and those that suit a single talent come last.

At a glance

- Politics and public policy ●●●
- Education and learning ●●●
- Business and entrepreneurship ●●●
- Visual arts and visual design ●●
- Music and sound ●●
- Performing arts ●●
- Technology and digital systems ●
- Research and development ●
- Engineering and technical applications ●
- Project organisation and management ●

Each ● is one of your talents that leads to this field.

- **Politics and public policy**: Shaping policy, representation and public debate – e.g. policy analyst, adviser, organisation officer. Draws on: Strategic thinking, Leadership and initiative, Presenting and public expression, A sense of fairness and justice.
- **Education and learning**: Teaching, training and designing learning for every age – e.g. teacher, adult trainer, learning designer. Draws on: Supporting and encouraging others, Teaching and sharing knowledge, Empathy and care.

- **Business and entrepreneurship**: Founding and running businesses, marketing and sales – e.g. entrepreneur, business manager, marketing manager. Draws on: Leadership and initiative, Strategic thinking, Enterprise and managing resources.
- **Visual arts and visual design**: Painting, sculpture, graphic design, illustration and photography – e.g. visual artist, graphic designer, illustrator. Draws on: Imagination and artistic expression, Aesthetics and design.
- **Music and sound**: Performing, composing, teaching music and sound technology – e.g. musician, composer, sound engineer. Draws on: Imagination and artistic expression, Presenting and public expression.
- **Performing arts**: Theatre, dance and live performance – e.g. actor, dancer, director, drama facilitator. Draws on: Imagination and artistic expression, Presenting and public expression.
- **Technology and digital systems**: Software, networks, cybersecurity and digital services – e.g. programmer, software engineer, security specialist. The field that best suits the talent "Original thinking and new ideas".
- **Research and development**: Research at universities, laboratories and companies for new knowledge and products – e.g. researcher, analyst, development scientist. The field that best suits the talent "In-depth research".
- **Engineering and technical applications**: Designing and building machines, structures and technical systems – e.g. engineer, technologist, technician. The field that best suits the talent "Practical making and building".
- **Project organisation and management**: Planning, coordinating and tracking projects and teams – e.g. project manager, coordinator, administrative manager. The field that best suits the talent "Organisation and consistency".

Other directions

Fields linked to one of your talents that are worth keeping in mind.

- **Public administration**: State and local government services – e.g. civil servant, municipal officer, administrative officer.
- **Film and audiovisual media**: Film, television, video and animation – e.g. director, screenwriter, editor, producer.
- **Games and interactive experiences**: Designing and developing digital games and interactive applications – e.g. game designer, developer, user experience designer.
- **Communication and media**: Journalism, public relations, advertising and digital content – e.g. journalist, communications officer, content creator.
- **Fashion and creative design**: Designing clothes, accessories and products – e.g. fashion designer, product designer, stylist.
- **Sport and exercise**: Sport, coaching and physical activity – e.g. coach, fitness instructor, sports event organiser.

This report is not a promise of who you will become; it is a reminder that you may try, choose and grow.
